

OUR STORY

For over four decades, we at Layfield Geosynthetics have committed to building a sustainable future by incorporating geosynthetic technology to preserve your water, protect your environment, and improve the resilience of your critical infrastructure.

VERTICAL INTEGRATION

Our dedicated team of professionals ensures your project proceeds smoothly from start to finish. Your project benefits from exclusive **single-source accountability** through our combined abilities to manufacture, fabricate, install, and service.

MANUFACTURING

Layfield is the leading manufacturer of purpose-built geomembranes in North America. Manufactured with special prime-grade resins blended with advanced additives, our geomembranes provide superior physical, mechanical, and endurance properties explicitly designed for your containment's unique requirements.

FABRICATION

Factory fabrication reduces or eliminates the need for field welding of a geomembrane liner. This has many benefits, including quality and speed of installation. Strategically located fabrication facilities and over four decades of expertise make Layfield a popular industry choice.

INSTALLATION AND CONSTRUCTION SERVICES

We know that superior performance depends on quality installation. Our installation crews are trained in quality control, safety, and have extensive project management experience so that every geosynthetic installation is as reliable as the last.

**45+ YEARS
OF GEOSYNTHETIC
EXPERTISE**

**400+ SUCCESSFUL
FLOATING COVER PROJECTS
AROUND THE WORLD**

**OVER
40+ MILLION
SQUARE METRES
OF LINERS INSTALLED**

SUSTAINABILITY

Layfield believes that geosynthetics make a significant contribution to a more sustainable future. These products make our infrastructure more resilient. Geosynthetics extend the service life of roads, reduce the use of aggregates, conserve and protect water, minimize land disturbance, and control soil erosion.

Protecting our environment is a core value of Layfield and sustainability is at the heart of what we do. We are committed to developing innovative, quality products to help build a better future for communities and our families.
